

Self-Stripping Connectors (*Scotchlok Type*)

A range of six connectors provides a unique and simple way to make tap inline and pigtail connections for a combination of wire sizes from 0.75 mm² to 6 mm².

Features

1. Simple to use - apply with pliers.
2. Excellent electrical connection without cutting tap or run wires.
3. Three kinds of connection possible, tap connection and low voltage for inline and pigtail connection.
4. Coloured range of sizes.

Operation

The basis of these connectors is the tried and tested self-stripping 'U' element of tin-plated brass. The connection is made as the 'U' element is compressed through the slot in the top of the Scotchlok connector to the anchoring groove in the base.

As the element is pressed through the slot it contacts the insulation and shears it away from the conductor. It then firmly grips the conductor giving a resilient, safe connection that will not deteriorate
